OFFICIAL PRODUCT MANUAL

SeeWe AI

The Complete User Manual — every role, every flow, every feature.

A modern job marketplace with a built-in AI interviewer. This manual walks all three roles — Job Seeker, Recruiter and Client Partner — through the full hiring lifecycle, step by step, from the first job post to the final offer.

Job Seeker | Recruiter | Client Partner | Admin Console

EDITION 2025 · V1.0

PLATFORM GUIDE

QUICK START · HINGLISH

Pehle Yeh Padhiye — Ek Nazar Mein

SeeWe AI ek modern job marketplace hai jisme hiring platform ke andar hi ek AI interviewer built-in hai. Candidate apply karta hai, recruiter shortlist karta hai, aur phir AI candidate ka video interview leta hai — bolte hue answers, automatic transcript, scoring aur complete report ke saath. Poora process teen roles ke beech chalta hai, aur yeh manual har role ka poora flow explain karta hai.

👤

Job Seeker (Candidate)

Profile banata hai, resume AI se parse karwata hai, jobs dhoondhta aur apply karta hai. Shortlist hone par AI video interview deta hai — sirf bolke. Score kabhi nahi dikhta, sirf updates aate hain.

🏢

Recruiter

Job post karta hai, applicants manage karta hai, AI interview start karta hai, poora report + transcript + recording dekhta hai, client ko report bhejta hai, aur ATS me candidate push karta hai.

🤝

Client Partner

Apna registered email use karke portal me login karta hai. Shared AI reports review karta hai — score, dimensions, transcript, recordings — aur Approve / On hold / Decline decision deta hai.

🛡️

Admin (Platform Console)

Platform-wide console demo users ke liye. Is manual ke scope me teen hiring roles cover kiye gaye hain — admin console internal operations ke liye hai.

Demo Account	Email	Kaun use kare
Candidate · React Dev	arjun.mehta@gmail.com	Job seeker flow test karne ke liye
Recruiter · TechNova	ananya@technova.com	Recruiter suite ke liye (do aur: rahul@cloudnine.com, priya@dataforge.com)
Client · Flipkart	partnerships@flipkart-demo.com	Client portal ke liye (Infosys aur Zoho emails bhi seeded hain)
Admin · Platform console	admin@seewee.ai	Platform admin view

Note: Yeh demo-lite system hai — **password kahin nahi hota**. Sign in karte waqt sirf email (aur naye users ke liye naam) chahiye. Demo chips par click karke account ek click me load ho jata hai. Manual bhar me saare button names aur labels bilkul waise hi likhe hain jaise app me dikhte hain.

CHAPTER 01

Platform Overview

SeeWe AI do cheezein ek hi jagah laata hai: ek job marketplace jahan candidates jobs dhoondhte hain aur recruiters roles post karte hain, aur ek AI interviewer jo shortlisted candidates ke video interviews khud conduct karta hai. Interview ke saare jawab bolke diye jaate hain — AI unhe speech-to-text me convert karta hai, har answer ko evaluate karta hai, aur ek complete rated report banata hai jise recruiter aur client review karte hain.

Platform ka core promise simple hai: **hiring with evidence**. Traditionally ek recruiter phone screens par ghante bitata hai; yahan AI interviewer 24×7 available hai, har candidate se same structured process follow karta hai, aur har answer ki recording + transcript + score save karta hai. Recruiter ke paas evidence-based decision lene ke liye poora dossier hota hai, aur client ko sirf relevant reports dikhte hain. Candidate ke liye process transparent hai — usse kabhi bhi apna AI score nahi dikhta, sirf clear status updates aate hain.

The hiring pipeline — end to end

STAGE 1	STAGE 2	STAGE 3	STAGE 4	STAGE 5
Applied	Shortlisted	AI Interview	Client Review	Offer

Yeh panch-stage pipeline har role ke screen par alag-alag roop me dikhta hai. Candidate ko apne application card par ek animated 5-dot tracker dikhta hai. Recruiter ko Applicants inbox me status badges aur timeline chips dikhte hain. Client ko sirf Stage 4 ke reports dikhte hain jo recruiter ne share kiye hain. Har stage ka data automatically aage flow karta hai — kisi ko manually same data dobara enter nahi karna padta.

Core concepts — jo har role ko pata hone chahiye

🤖 AI Interviewer

Ek virtual interviewer jo candidate ke resume aur job ki JD (job description) dono se milkar questions generate karta hai. Questions **bolkar** puchhe jaate hain (text-to-speech), candidate bolke jawab deta hai, aur speech engine (ASR) usse text me convert kar deta hai. Total 10 questions hote hain — 6 core skill questions + 4 quick profile questions (Section 3.8 me detail).

🚦 Verdicts — AI ka final recommendation

Interview complete hone par AI overall score (0–10) nikalta hai aur chaar dimensions grade karta hai: **Technical Depth, Communication, Problem Solving, Domain Knowledge**. Score se verdict banta hai. Verdict sirf recruiter aur client dikhta hai — candidate ko kabhi nahi.

🚀 Strong Hire · 8.0+ | ✅ Hire · 6.5+ | 🤔 Maybe · 5.0+ | ❌ No Hire · below 5.0

🔒 Score privacy — candidate kabhi score nahi dekhta

Yeh platform ka design principle hai, sirf UI rule nahi. Candidate ke interview room, dashboard, notifications aur API responses — sab jagah se AI score, feedback aur verdict server par hi filter ho jaate hain. Candidate ko sirf "Answer submitted" jaise neutral confirmations milte hain. Scores sirf recruiter aur (share hone par) client ke paas jaate hain.

📦 ATS dossier — candidate ka poora record ek payload me

Interview complete hone ke baad recruiter candidate ka complete dossier apne company ke ATS (Applicant Tracking System) me push kar sakta hai — profile, position, interview plan, saare answers, transcripts, scores, report aur client decision. Webhook push ke alawa JSON copy/download aur per-position CSV export bhi available hai (Section 4.6).

CHAPTER 02

Getting Started — Sign In & Navigation

Platform ek single-page app hai — home page se hi saare views open hote hain. Sign in karne ke liye header me **Sign in** button dabaiye. Ek hi dialog se chaaron account types me entry milti hai, aur demo accounts one-click chips ke saath pre-loaded hain.

2.1 Sign in kaise karein

1. **Sign in dialog kholein**
   Header ke "Sign in" button par click karein — ya koi bhi gated action (job save, apply, alert) karne ki koshish karein, dialog khud khul jayega. Dialog ka title hai **"Sign in to SeeWe"** — "One account. Three worlds — hire, get hired, or review hires."

2. **Account type chunein**
   Chaar radio cards: **Job Seeker** (default), **Recruiter**, **Client**, **Admin**. Client role me naam field disabled hota hai — "Auto-filled from client registry" — kyunki organisation ka naam aapke recruiter ke client registry se match hota hai.

3. **Naam aur email bharein (ya demo chip dabayein)**
   Naye Job Seeker / Recruiter ke liye naam + email chahiye. Neeche **"Demo accounts — one click:"** section me chips hain — chip par click karne se role, naam, email sab pre-fill ho jata hai aur toast aata hai: *"Demo account loaded — press Continue"*.

4 **Continue dabayein**
Button har role ke hisaab se badalta hai: **"Continue as Job Seeker ✨"**, **"Continue as Recruiter 🚀"**, **"Continue as Client Partner 🤝"**, **"Platform Admin 🛡️"**. Success par toast: *"Welcome to SeeWe, {aapka naam}! 👋"* — aur aap seedha apne role ke dashboard me pahunch jaate hain.

> **CLIENT LOGIN KA SPECIAL RULE**
> Client role sirf tab kaam karta hai jab aapka email kisi recruiter ne **Clients** tab me registered kiya ho (Client ka contact email). Email match nahi hua to error: *"No client partnership found for this email. Ask your SeeWe recruiter to add you as a client first."* Pehli login par client ka user account automatically ban jata hai.

2.2 Navigation — screen ke upar kya hai

Header element	Kya karta hai
Nav links	Role ke hisaab se badalte hain. Candidate: *Home / Find Jobs / My Journey*. Recruiter: *Home / Find Jobs / Hiring Hub*. Client: *Home / Find Jobs / Client Portal*.
🔔 **NotificationBell**	In-app notifications — har 25 second me refresh, unread badge (9+ cap), "Mark all read", 7-day digest strip + "Email digest" preview. Kisi notification par click karne se aap seedha us record par le jate hain (deep-link).
🔵 **JobAlertsBell**	Sirf candidates ke liye — har 60 second me naye matching jobs check karta hai. Har alert ke saath "N new" pill dikhta hai. Popover band karte hi alerts "seen" mark ho jaate hain.
Theme toggle	Light / dark mode switch — poori app me lagu hota hai.
Account menu	Avatar dropdown: Dashboard, Copy email, **Sign out** (toast: "Signed out — see you soon! 👋").
Mobile (☰)	Chhoti screen par hamburger sheet me wahi nav + Sign in / Register milta hai; touch targets 44px+ hain.

Ek important baat: app **single-page** hai, isliye sab kuch home route se hi chalta hai. Views switch hone par URL change hota dikhta hai lekin page reload nahi hota — isliye session, filters aur draft data sab zinda rehte hain. Sign out karne par view home par reset ho jata hai aur deep-link state clear ho jata hai.

CHAPTER 03

Job Seeker Guide — Candidate ka Poora Flow

Candidate ka safar chausar steps me chalta hai: profile complete karo, jobs dhoondo, apply karo, shortlist hone par AI video interview do, aur phir My Journey me tracking karo. Candidate ko AI score kabhi nahi dikhta — usse sirf clean status updates aur next steps milte hain.

3.1 My Journey dashboard

Login ke baad candidate seedha **My Journey** dashboard par aata hai. Header me greeting ("Welcome back, {naam} 👋"), tagline ("Your mission control — applications, AI interviews and profile"), aur teen stat badges hain: **N applications**, **N AI interviews graded**, **N reports shared**. Neeche Profile Strength meter aur chaar tabs hain:

1 · Applications | 2 · Saved | 3 · Alerts | 4 · My Profile

3.2 Profile banana — My Profile tab

Profile form me ye fields hain: **Full name, Phone, Headline, Location, Skills (comma separated), Experience (yrs), Current salary (LPA), Expected salary (LPA), Education, Notice period**. Notice period dropdown me options hain: *Immediate joiner / 15 days / 1 month / 2 months / 3 months*. Ek alag **"Visible to recruiters" toggle** hai — ON par "Your profile appears in recruiter talent searches", OFF par "Hidden — recruiters cannot find you in talent search. Applications stay active." Sabse neeche **Resume summary** textarea hai — hint kehti hai: "Saved drafts power your AI interview questions — keep them sharp." **Save Profile** dabane par PATCH call chalti hai; network fail hone par draft device par save rehta hai aur amber banner dikhta hai: "Offline draft on this device — check your connection and press Save profile to sync it."

Profile Strength check	Weight	Kab complete hota hai
List your skills	20	Skills field filled
Save your resume text	20	Resume text 100+ characters
Add a headline	15	Headline filled
Set years of experience	15	Experience set
Add your city	10	Location filled
Add education	10	Education filled
Add a phone number	10	Phone filled

Total 100 points ka animated ring banta hai. Bands: **90+ All-star profile**, **70+ Strong profile**, **40+ Good start**, warna **Getting started**. Missing items amber chips ke roop me dikhte hain aur unpe click karne se seedha My Profile tab khulta hai — matlab profile strong karne ka rasta ek click ka hai.

3.3 AI Resume Parser

"Instant resume import" card me do input modes hain: **Paste text** (12,000 characters tak) aur **Upload file** — drag-and-drop dropzone jo PDF, DOCX, TXT, MD, CSV, JSON accept karta hai (3 MB tak; PDF/DOCX server par parse hote hain). **"✨ Analyze with AI"** dabane par parser resume padhta hai aur ek review screen deta hai jisme **"AI parsed"** ya **"Heuristic parse"** badge hota hai. Aap fields edit kar sakte hain: Headline, Location, Experience, Current company, Education, aur Skills chips (add/remove). Checkbox **"Also save the full resume text (powers better AI interviews)"** default ON rehta hai. **"Apply N fields to my profile"** par click karne se sab kuch profile me chala jata hai — toast: "Profile updated with AI-extracted details ✨".

3.4 Jobs dhoondhna — Find Jobs

Find Jobs page par header line hoti hai: *"{N} live openings waiting for you"*. Filter form me: **Keyword** (role, skill, company), **Location**, **Job type** (Full-time / Part-time / Contract / Internship), **Work mode** (Remote / Hybrid / On-site). Advanced row me: **Experience** (Fresher se 10+ yrs tak), **Salary** (5 LPA+ se 30 LPA+), **Posted** (last 3/7/15/30 days), aur **Sort by** — default **"Newest first"** (freshness-first ranking) plus salary high/low. Filters active hone par **"Save this search"** chip aata hai — saved searches chips ki tarah ek click me wapas lag jaate hain (max 8).

Har job card par: company avatar + naam, title, location, experience range, salary (₹18 – ₹28 LPA format), posted date, skill chips, aur signed-in candidates ke liye **"⚡ N% match"** pill (aapke skills aur job ke required skills ka overlap). Neeche salary bands ka **"Salary insights"** strip bhi hota hai jo current search ke roles ka market scale dikhata hai. Kisi bhi company ke naam par click karne se us company ki **saari active jobs** ek dialog me khul jaati hain.

3.5 Apply karna

1. **Job detail dialog kholein**
   Job card par click karein. Dialog me poori JD, saare skills, views count, aur ek AI note hota hai: *"SeeWe AI reads this role's JD. If you're shortlisted, your interview questions will be generated specifically from this job and your resume."*

2. **Cover note likhein (optional)**
   600-character counter ke saath ek optional note: *"Why are you a great fit for {title}? Recruiters love context..."*

3. **"Send my application ⚡" dabayein**
   Success toast: *"🎉 Applied to {title}! Track it in My Journey."* Dobara apply karne ki koshish par same job ke liye button badal jata hai: *"You have already applied for this position 🎉"* — duplicate applications block ho jaate hain.

3.6 Applications track karna — status pipeline

Applications tab me har application ka card hai jisme 5-dot animated tracker hota hai: **Applied** → **Shortlisted** → **AI Interview** → **Client Review** → **Offer**. Completed dots check ban jaate hain, current dot pulse karta hai, aur Offer dot Hire hone par 🎉 ke saath green ho jata hai. Card par recruiter engagement signal bhi dikhta hai: *"👁️ Viewed by recruiter · 2h ago"* ya *"Awaiting recruiter review"*.

Aapko kya dikhta hai	Matlab
"▶️ Resume AI Interview" (pulsing button)	Recruiter ne shortlist kar diya — AI interview start/resume karne ke liye ready hai.
"📊 Interview completed — tap to review your answers" + "✓ Submitted" chip	Interview ho gaya — apne answers ka transcript review kar sakte hain (score ke bina).
"Shared with {client}" badge	Aapka AI report hiring client ko bhej diya gaya hai — client review chal raha hai.
"Offer received — congratulations!" card	Company ne aapko HIRED mark kiya hai. 🎉
"Withdraw application" (sirf Applied stage par)	Confirm dialog ke baad application withdraw ho jati hai (baad me dobara apply kar sakte hain).

3.7 AI Video Interview — step by step (candidate ka sabse important section)

Interview room full-screen experience hai. Usme camera, microphone, aur SeeWe ka AI interviewer hota hai — **koi typing nahi**. Neeche poora flow diya gaya hai:

1. **Room prepare hota hai**
   "Preparing your interview room..." ke baad AI aapke resume + job ki JD se 10 questions ka plan banata hai. Agar beech me interview adhoora chhoda tha, to wahi se resume hota hai — answered questions waise hi milte hain aur aap pehle unanswered question par land karte hain.

2. **Welcome card**
   "You have been shortlisted 🎉" — aapka naam, "AI video interview · {job title}", aur badges: **domain** (jaise IT & Software), **level** (EASY / MEDIUM / HARD), **N questions**. Checklist aapko batati hai: *"Answer out loud — your words are transcribed automatically"*, *"Voice-only room — just speak; no typing needed"*. Privacy line: *"Private room. Nothing is broadcast live — your answers are shared only with the hiring team."*"**Begin AI Interview ✨**" dabane par camera permission maangi jaati hai (mana karne par bhi voice answers chalte rehte hain).

3 **Question suniye — AI bolkar puchhta hai**
AI interviewer question **bol kar** puchhta hai (mute button bhi hai). Card par "Question {i} of {N}", focus area badge (jaise "State architecture"), aur **Replay** button hota hai. Left side par aapka camera preview (mirror view, "You" badge, Rec indicator + mic level bars) aur progress card hai — jisme answered/total count aur tappable question navigator dots hain.

4 **Bol kar jawab dijiye**
" 🎙️ Record Answer" dabaiye aur bolna shuru karein. Recording me video + audio dono capture hote hain (camera off ho to sirf audio), 3-minute ki limit hai, aur live REC timer chalta hai. Bolte waqt aapke shabd read-only transcript box me appearance late hain (ASR). Word-count hint bhi milti hai: *"{n} words · aim for 40–150 words"*.

5 **Take A / Take B — dobara bolne ka option**
Har question par **2 takes** record kar sakte hain. "Add Take B" se naya take, preview players se dono compare, "Discard" se bekar take hatao — phir best take submit karo. Jo take discard hota hai wo kabhi upload hi nahi hota; sirf selected take server par jata hai.

6 **Submit karein**
"Submit Take A ➜" dabane par upload hota hai. AI evaluate karta hai, lekin aapko sirf neutral confirmation dikhta hai — green **"Answer received"** card: *"Your response is safely recorded. The hiring team reviews every answer after the interview."* Score, feedback, strengths — kuch bhi nahi dikhta. "Next Question ➜" se aage badhein.

7 **Aakhri 4 quick profile questions**
Core questions ke baad AI 4 preliminary questions puchhta hai — ye AI-graded nahi hote, ye seedha aapki profile me sync ho jaate hain. Toast: *"Response saved to your profile"*. (Inke exact text niche diye hain.)

Question	Poochha jata hai	Profile field
Q7	"Which city do you currently live in, and would you be open to relocating for this role?"	Location
Q8	"How many years of total work experience do you have, and what kind of work have you mostly been doing?"	Experience (yrs)
Q9	"What is your notice period — are you currently serving any notice, and how soon can you join if selected?"	Notice period
Q10	"Finally, what is your current salary, and what are your salary expectations for this role?"	Current + Expected CTC

8 **Finish & Submit**
Last question ke baad **"Finish & Submit"** dabta hai. Staged screen chalti hai: "Securing your recordings… / Uploading your responses… / Notifying the hiring team…" — phir **"Interview complete 🎉"** screen aati hai: answers count, session time, aur 3 next steps (recordings securely stored → hiring team har answer review karta hai → updates My Journey me aayenge). **"Review your answers"** se aap apna poora transcript dobara dekh sakte hain — apne jawab, apni recordings ke saath, bina kisi score ke.

SCORE PRIVACY PROMISE

Candidate experience me **AI score, verdict, ranking, per-question feedback — kuch bhi nahi dikhta**. Ye sirf screen chhupana nahi hai: interview ke API responses bhi server par candidate-safe hote hain (score fields network par travel hi nahi karte). Notification bhi score-free hota hai: *"Your interview responses are with the hiring team..."*. Honest design — aap answers review kar sakte hain, lekin evaluation sirf hiring team ke paas hai.

3.8 Job Alerts — naye jobs ki notification

Alerts tab me **"Create a job alert"** card hai: **Keyword** (jaise React, Python, DevOps), **Location**, optional **Min. salary (LPA)** — phir **"Create alert"**. Har alert card par: naam (jaise "React in Bengaluru"), **"🔔 N new"** badge ya "All caught up", total matches, aur 4 sample matching jobs. **"Browse matches"** se search pre-applied hoti hai. Header ke blue JobAlertsBell se bhi alerts milte hain aur "Manage" se Alerts tab khulta hai. Weekly **Email digest** preview dialog bhi hai (demo me simulated send hota hai).

3.9 Candidate ke liye pro tips

- **Resume summary sharp rakhein** — AI interviewer isi text se questions banata hai; jitna relevant content, utne personalized questions.
- **Profile 100% complete karein** — recruiters talent search me poori profile wale candidates ko hi dhoondhte hain (visible toggle ON rakhna mat bhoolen).
- **Interview me 40–150 words per answer bolen** — hint bhi yahi deti hai. Ek take kharab lage to Take B record karein.
- **Quiet room, decent lighting** — camera optional hai (voice answers bhi count hote hain), lekin video answers hiring team ko zyada confident impression dete hain.
- **Preliminary questions sincerely answer karein** — location, experience, notice period aur CTC aapki profile me automatically update hote hain, jisse recruiters ko accurate data milta hai.

CHAPTER 04

Recruiter Guide — Hiring Hub ka Poora Flow

Recruiter suite ek complete hiring command center hai: jobs post karo, applicants screen karo, AI interviews chalao, reports review karo, clients ke saath share karo, aur final candidates ko ATS me push karo. Dashboard ke 7 tabs ek structured flow me arranged hain — left se right jaane par hiring lifecycle complete ho jati hai.

4.1 Dashboard tour

Hero strip me greeting, **"+ Post a Job"** button, aur 4 quick stats hain: **Active Jobs · Total Applicants · Shortlisted · AI Interviews Done**. Stats ke niche analytics strip hai (Section 4.11). Phir 7 tabs:

Tab	Ek line me
My Jobs	Aapki posted jobs — edit, duplicate, pause, close, delete.
Applicants	Pipeline inbox — shortlist, interview, share, reject, notes, CSV export.
Interview Hub	AI interview command center — position-wise groups, 360° candidate detail, ATS push.
Talent Search	Poora candidate pool search karo — skills, experience, notice period ke saath.
Client Reports	"Boardroom view" — saare AI reports ek jagah, client decisions ke saath.
Recordings	Har interview answer ki recording library — play, download, ZIP, storage cleanup.
Clients	Client companies register karo aur unki recording retention set karo.

4.2 Job post karna

"Post a Job" dialog ka subtitle kehta hai: *"Goes live instantly. The richer the JD, the sharper the AI interview questions."* Fields: **Job title*, Location*, Job type, Work mode, Description*, Skills* (comma separated — quick-add chips: + React + Node.js + Python + SQL + AWS + Figma), Openings, Exp. min/max (yrs), Salary min/max (LPA)**, aur ek highlighted **Full JD** textarea jiska label clearly kehta hai: "used by AI interviewer to generate questions". **"🚀 Post Job"** dabane par job turant ACTIVE ho jaati hai. Candidate apply karta hai to system aapko notification deta hai: *"{candidate} applied with a {n}% skill match — worth a look."*

4.3 Applicants inbox — structured pipeline management

Applicants tab me upar job chips hain (*All jobs · {n}* + har job ka chip), status dropdown, **CSV export** icon aur refresh. Har application card par: candidate avatar + naam, status badge, headline, *"X yrs exp · location · Wants ₹N LPA · notice label"*, skill chips, cover note quote, aur right side par **"🎯 {n}% match"** pill (excellent / strong / Low skill overlap). Har card par mini timeline chips bhi hote hain: *Shortlisted ✓ → AI Interview {score}/10 → Shared · {client} → 👍 Client approved ✓*.

Action button	Kya hota hai

Shortlist ★	Dialog khulta hai: "Pick the client who should receive this candidate's AI report once the interview completes" — "Skip — decide later" ya koi client choose karke "Shortlist candidate". Candidate ko ⭐ notification jata hai.
Start AI Interview 🤖	Full-screen Interview Room khulta hai (candidate is interview me apne side se join karta hai). Client choose nahi hua to pehle "Send report to client after interview" dialog aata hai. Aap chahein to room se bahar aakar baad me wapas aa sakte hain — candidate apna interview khud complete karta hai.
Resume Interview	Live (in-progress) interview wapas kholne ke liye.
View AI Report	Report dialog: VerdictRing (Overall score {x}/10), AI Summary, poora transcript, "Download PDF".
Share Report →	Client picker → "Share report →" — report us client ke portal me chali jaati hai (sirf completed interviews share hote hain). Toast: "📤 AI report shared with {client}".
Reject	Candidate pipeline se bahar (candidate ko gentle "Application update" notification jata hai).
Notes	"Private note · only you see this" — 2000 characters, autosave. Candidate ko kabhi nahi dikhta.

4.4 AI interview andar se kaise kaam karta hai

Domain detection: Interview start hone par AI job ke title/skills se domain detect karta hai — 13 buckets: *IT & Software, Data & Analytics, Design & Creative, Sales & Business Development, Marketing & Communications, Finance & Accounting, Human Resources, Operations & Support, Education & Training, Healthcare, Legal & Compliance, Hospitality & Travel, General Business*. Non-technical domains ke rules me coding questions explicitly ban hote hain — matlab Sales, HR, Finance, Operations sabke liye domain-appropriate questions aate hain. Agar AI kisi reason se questions na bana paye to domain-neutral template fallback chalti hai.

Question plan (10 questions): Q1 intro/experience-fit, Q2–Q5 core skill aur scenario questions (JD ∩ resume overlap se), Q6 practical problem-solving — in sab ke saath rubric points (*modelAnswerPoints*) hote hain jinke against answers grade hote hain. Q7–Q10 wo 4 preliminary profile questions hain (Section 3.7) jinke spoken answers parse hokar candidate profile me **auto-feed** ho jaate hain — location, experience, notice period, CTC.

Evaluation: Har core answer ka score 0–10 (1 decimal) hota hai, saath me AI feedback, strengths aur improvements. Final overall score core answers ka mean hota hai aur verdict banta hai (🚀 Strong Hire 8+, ✅ Hire 6.5+, 🤔 Maybe 5+, ❌ No Hire neeche). Report me 4 dimension scores (Technical Depth, Communication, Problem Solving, Domain Knowledge), AI summary, strengths, watch-outs aur recommendation hoti hai. Interview complete hone par aapko notification aata hai: *"{verdict emoji} AI interview done · {candidate} · {x.x}/10"*.

4.5 Interview Hub — sab interviews ek jagah

Hub upar 4 KPI cards dikhata hai: **Positions interviewed · Total interviews · Completed · Avg score ({x.x}/10)**. Ek powerful **search box** hai — candidate, position, skill, city, verdict label, aur *saare question texts* me search karta hai. Verdict filter pills: *All · ⏳ In progress · 🚀 Strong Hire · ✅ Hire · 🤔 Maybe · ❌ No Hire*. Neeche job-wise collapsible groups hain — har group header par interview count, completed count, in-progress count, avg score pill aur **"Export CSV"** button (18-column ATS-import ready sheet: contact, CTC, notice, score, verdict, timeline sab columns).

Kisi bhi candidate par **"Open →"** dabane se 360° detail dialog khulta hai. Usme (a) big score tile, (b) 6 auto-captured detail chips — Location, Experience, Notice period, Current CTC, Expected CTC, Headline — jinme interview se capture hui values par teal **"via interview"** badge hota hai, (c) contact + education + skill-match chips, (d) **Journey strip**: "Applied {date} · Recruiter viewed {date} · Interview {date}" + application status + client decision, (e) Resume snapshot, (f) **"Questions asked & candidate answers"** — poora question plan, har question ka focus area, candidate ka transcript, per-question score, AI note, aur inline video/audio player, (g) **AI report summary** — dimension bars, strengths, watch-outs, recommendation, aur (h) **ATS handoff panel**.

4.6 ATS Integration — candidate ko apne ATS me bhejna

Interview Hub ke detail dialog me **"Send to ATS"** panel hai (sirf completed interviews par unlock hota hai): *"Push {candidate}'s complete dossier — profile, interview plan, answers, recordings metadata, scores and report — into your own hiring pipeline for the next process."*

1. **Integration register karein (ek baar)**
   "+ New integration" → Integration name (jaise "Company hiring pipeline"), **Webhook URL** (aapke ATS ka POST endpoint, jaise https://ats.yourcompany.com/hooks/seewee), optional **API key** (x-ats-api-key header me jaati hai) → **"Save integration"**. Integration pause/delete bhi ho sakta hai.

2. **Push karein**
   "Push to ATS" se server aapke webhook par poora dossier JSON POST karta hai (8-second timeout). Success: "{candidate} delivered to {integration}". Fail hone par honest warning dikhti hai aur attempt log ho jata hai — aap phir bhi manual handoff kar sakte hain.

3. **Ya manual handoff karein**
   "Copy JSON" — payload clipboard me (ATS ke import box me paste karo); **"Download"** — seewee-ats-{candidate}.json file. Neeche **push log** me har attempt ka result (✓/✗, message, timestamp) dikhta hai. Per-position **Export CSV** se bulk import sheet bhi milti hai.

Dossier section	Kya-kya data jaata hai
candidate	Naam, email, phone, headline, location, skills, experience, current/expected salary, notice period, education, 2000-char resume summary.
position	Job title, company, location, required skills, salary band, openings, status.
application	Application id, status, match score, applied/viewed timestamps.
interview	Poora plan (saare questions + focus areas + rubric), har answer ka transcript + score + feedback + strengths + recording metadata, overall score, verdict, full report (4 dimensions).
process	Shortlist status, client name, client decision, client feedback, decided at.

4.7 Talent Search

Talent Search me filters hain: keyword (naam, headline, skills, resume, location — 400ms debounce), exact **Skill** match ("Java" "JavaScript" se alag hai), **Location**, Min/Max experience, **Notice period** (Immediate / ≤15 / ≤30 / ≤60 / ≤90 days), aur **"Applied to my jobs"** toggle (ON = sirf aapke pipeline wale; OFF = poora platform pool — lekin privacy ka dhyan: sirf wo candidates dikhte hain jinka "Visible to recruiters" ON hai). Pipeline me aaye candidates par wahi actions milte hain: Shortlist ★, Start AI Interview 🤖, Resume Interview, Reject.

4.8 Clients tab

"+ Add Client" dialog me: **Company name***, **Contact email*** (yahi email client portal ka login banega), **Industry**, **Internal notes**. Client card par share count, industry badge, aur **"Recording retention"** policy hoti hai — Default 45 days, ya 7 se 365 din tak per-client override. Retention decide karti hai ki candidate recordings kitne din baad storage cleanup me delete hongi.

4.9 Client Reports — boardroom view

Ye tab saare completed AI interviews ka "boardroom view" hai: stat tiles (**Total reports · Avg AI score · Strong-hire rate**), client filter, card/table layout toggle. Har report card par verdict medal, candidate, role, client, ScoreRing aur client-decision badge (👍/⏸/👎) hai. **"Open Full Dossier"** se poora transcript + report khulta hai aur **"Download PDF"** se branded confidential print view milti hai. Table mode me columns: Candidate · Role · Client · Score · Verdict · Completed.

4.10 Recordings library

Recordings tab me summary tiles hain: **Recordings · Total footage · Video/Audio counts · Candidates · On disk size**. Filters: type (All/Video/Audio) aur candidate dropdown. **"Download all ({n})"** se poore set ka ZIP banta hai (numbered files jaise 01-{candidate}-Q1.webm + manifest). **"Clean storage"** se orphan recordings aur retention-crossed files sweep hoti hain (toast batata hai kitni files gayi, kitna space free hua). Har row par Watch (inline transcript + player), download icon, per-answer score chip aur verdict pill hai.

4.11 Analytics strip

- **Applicants per job** — top 6 jobs ki bar chart.
- **AI interview verdicts** — Strong Hire / Hire / Maybe / No Hire counts + avg score pill.
- **Hiring funnel** — har top job ka segmented bar: Applied → Shortlisted → AI interviewed → Client ✓, with "{n}% advance" pill.
- **Client decisions** — 👍 Approved / ⏸️ On hold / 👎 Declined ka share + latest decision line.

4.12 Recruiter notifications

Event	Notification
Candidate applies	"New application · {job}" — "{candidate} applied with a {n}% skill match — worth a look." (Applicants tab par deep-link)
AI interview completes	"{verdict emoji} AI interview done · {candidate} · {x.x}/10" — verdict + report ready.
Client decision deta hai	"{emoji} {client} · {candidate} · {job}" — "...wants to move forward / on hold / declined... Note: {feedback}"

CHAPTER 05

Client Partner Guide — Portal ka Poora Flow

Client partner wo hiring company hai jiske liye recruiter candidates dhoondh raha hai. Client ko portal me sirf wahi AI reports dikhte hain jo recruiter ne unke saath share kiye hain. Client ka kaam simple hai: report padho, recordings dekho, aur decision do — Approve, On hold, ya Decline. Decision turant recruiter ko notify hota hai.

5.1 Access kaise milta hai

1. **Recruiter aapko register karta hai**
   Recruiter apne **Clients** tab me aapki company add karta hai — company name aur **contact email**. Wahi email aapka portal credential ban jata hai.

2. **Aap sign in karte ho**
   Sign in dialog me **Client** role chunein, apna registered email dalein, **"Continue as Client Partner 🤝"** dabayein. Naam field auto-filled hota hai ("Auto-filled from client registry"). Pehli login par hi aapka portal account ban jata hai.

3. **Client Portal khul jata hai**
   Header me "Client Portal" link aa jata hai. Portal ka hero aapki company dikhata hai (naam, industry chip, recruiter ke internal notes quote) aur 4 KPI tiles: **Reports shared · Avg AI score · Strong-hire rate · Awaiting your call**.

5.2 Reports review karna

Sticky filter bar me: **search** (candidate, role, skill), **verdict dropdown** (All / 🚀 / ✅ / 🤔 / ❌), **sort** (Newest first / Highest score / Lowest score) aur **"Undecided only"** toggle. Har report card par score donut, candidate naam, verdict badge, experience + location, context line (*"Interviewed for {job} @ {company} · MEDIUM · 10/10 questions · 2h ago"*) hai. **"View report"** expand karne par: **AI Summary**, 4 **dimension bars** (Technical Depth, Communication, Problem Solving, Domain Knowledge), **Strengths** 👍 / **Watch-outs** 👎, candidate snapshot (experience, expected salary, notice period, skills), aur poora **Interview Transcript** — har question, har answer ka verbatim transcript, inline **video/audio players** aur per-question scores. Upar **"Download recordings (ZIP)"** aur **"Print / PDF"** buttons hain.

5.3 Decision dena — "Judge candidate"

1. **Judge candidate dabayein**
   Undecided cards par gradient button hota hai. Dialog khulta hai: "Your verdict on {candidate} — {job} @ {company} · AI score {x.x}/10. Your decision is shared back with the SeeWe recruiter."

2. **Decision chunein + note likhein**
   Teen options: 👍 **Approve**, ⏸️ **On hold**, 👎 **Decline**. Optional note (600 characters): *"e.g. Strong on system design — move to the final culture round."* **"Submit verdict"** dabayein.

3. **Ho gaya — sabko pata chal jata hai**
   Toast: "Verdict sent — candidate approved ✅ The recruiter has been notified." Recruiter ko in-app notification jata hai aur candidate ko bhi score-free update milta hai. Decision **final aur locked** hai — change karna ho to apne SeeWe recruiter se baat karein. Card par aage se decision badge + aapka note dikhta hai.

✅ Client ko kya dikhta hai

Overall score + verdict, 4 dimension scores, AI summary, strengths/watch-outs, poora Q&A transcript (scores ke saath), recordings + ZIP, candidate ka naam/headline/location/skills/experience/expected salary/notice period, job title, apne past decisions.

🚫 Client ko kya nahi dikhta

Candidate ka email/phone/resume text, AI ke model answers, recruiter ke private notes, ATS payloads, doosre clients ke reports, in-progress interviews — aur pipeline ke early stages (Applied/Shortlisted) ke data.

Notification: Jab recruiter report share karta hai, client ko notification aata hai — "🧾 New AI report · {candidate} · {job}". Us par click karne se portal khulta hai aur usi report card par scroll + highlight hota hai. Weekly digest me "Report shared" section milta hai.

CHAPTER 06

End-to-End Lifecycle — Ek Candidate ka Poora Safar

Yeh walkthrough teeno roles ko ek hi timeline par laata hai. Example: Meghna, React developer, TechNova ke "Senior Frontend Engineer" role ke liye apply karti hai.

1. **Recruiter job post karta hai**
   Ananya (TechNova) "Senior Frontend Engineer" post karti hai — skills, JD, salary band. Job instantly live ho jaati hai aur Find Jobs me aa jaati hai.

2. **Candidate profile banata aur apply karta hai**
   Meghna ne pehle hi resume AI se parse karwaya tha (profile strength 90%). Wo job dhundti hai (⚡ 85% match), cover note likhti hai, "Send my application ⚡" dabati hai. System match score save karta hai aur Ananya ko notification deta hai.

3. **Recruiter shortlist karta hai**
   Ananya Applicants tab me Meghna ka card dekhti hai (🎯 85% match), "Shortlist ★" dabati hai, client (Flipkart) choose karti hai. Meghna ko "⭐ Shortlisted · {job}" notification milta hai — uske card par "▶️ Resume AI Interview" button jagah leta hai.

4. **AI interview hota hai**
   Meghna interview room me jaati hai. 6 core questions (resume + JD se, domain-aware) + 4 profile questions. Voice-only answering, Take A/B, har submit par neutral confirmation. Finish par "Interview complete 🎉".

5. **Report generate hota hai**
   System overall score (8.4/10) nikalta hai → 🚀 Strong Hire. 4 dimension scores, AI summary, strengths/watch-outs report banta hai. Meghna ke spoken preliminary answers us profile me auto-sync ho gaye (Pune, 8 yrs, 45 days, 12 LPA current / 18 LPA expected). Ananya ko "🚀 AI interview done · Meghna · 8.4/10" notification milti hai.

6. **Recruiter evidence review karta hai**
   Ananya Interview Hub me Meghna ka 360° detail kholti hai — saare answers, transcripts, recordings, dimension bars. Sab kuch theek hai, wo "Share Report →" se report Flipkart ko bhej deti hai.

7. **Client decision deta hai**
   Flipkart portal me "🧾 New AI report · Meghna · Senior Frontend Engineer" aata hai. Client report review karta hai (score donut 8.4, dimensions, transcript, ek recording bhi play karta hai) aur "Judge candidate" → 👍 Approve + note: "Strong on checkout flows — schedule final culture round."

8. **Recruiter next process aage badhata hai**
   Ananya ko "✅ Flipkart · Meghna · Senior Frontend Engineer" notification milti hai. Wo Meghna ko HIRED mark karti hai (Offer stage 🎉) aur Interview Hub se uska ATS dossier apne company hiring pipeline me push kar deti hai — profile + interview + report + client decision sab ek payload me. Meghna ko "🎉 Offer received" notification milta hai.

Candidate dikhawa	Recruiter dikhawa	Client dikhawa
Applied (tracker dot 1)	Badge "Applied" · 🎯 match%	—
⭐ notification + resume button	Badge "Shortlisted" ★	—
Interview room (10 questions)	"AI Interview · live" spinner	—
"✓ Submitted" + transcript review	"AI Interviewed" + View AI Report	—
"Shared with Flipkart" badge	Badge "Shared" · Share Report →	🗒️ New report card
Client Review dot	"👍 Client approved ✓" chip	"👍 Approved by your team"
🎉 Offer received	"Hired" badge	Decision locked, record me

CHAPTER 07

Reference, Privacy & FAQ

Quick reference — statuses, verdicts, notifications, privacy rules, aur aksar poochhe jaane wale sawaal.

7.1 Status glossary

Status	Matlab (kise dikhta hai)
APPLIED — "Applied"	Candidate ne apply kiya, recruiter review pending (dono ko dikhta hai)
SHORTLISTED — "Shortlisted"	Recruiter ne shortlist kiya; candidate interview start kar sakta hai
INTERVIEW_SCHEDULED — "AI Interview · live"	Interview room khul chuka hai, chal raha hai
INTERVIEWED — "AI Interviewed"	Interview complete + AI report ready (sirf recruiter/client evaluation)
SHARED_WITH_CLIENT — "Shared"	Report client portal me pahunch chuka hai
REJECTED — "Rejected"	Pipeline se bahar (candidate ko gentle notification, score nahi)
HIRED — "Hired"	Offer stage — candidate ko 🎉 celebration card

7.2 Privacy & data rules

- **Candidate score-blind hai** — interview API responses, dashboard, notifications, transcript view: har jagah se score/verdict/feedback server par strip hota hai. Ye defense-in-depth hai, sirf UI hide nahi.
- **Profile visibility toggle** — OFF karne par candidate talent search me nahi aata, lekin uski existing applications active rehti hain.
- **Recording retention** — default 45 days; recruiter per-client 7–365 days set kar sakta hai. Retention cross hote hi "Clean storage" sweep me recordings delete ho jaati hain (transcript text stay karta hai).
- **Recruiter notes private** hain; client ko candidate ke email/phone/resume ka raw text kabhi nahi dikhta.
- **Ek hi decision per report** — client verdict immutable hai; dobara decision dene ki koshish par clear error message.

7.3 FAQ

Q: Password kya hai?
Koi password nahi hai — demo-lite sign in hai. Sirf email (aur role) se entry milti hai. Demo chips se ek-click login hota hai.

Q: Candidate ko AI score kyun nahi dikhta?
By design. Score/verdict hiring team ke evidence ke liye hai. Candidate ko sirf process status aur apne answers dikhte hain — isse anxiety kam hoti hai aur evaluation unbiased rehta hai.

Q: Interview beech me chhoda ho jaye to?
Koi problem nahi — interview idempotent hai. Dobara "Resume AI Interview" dabane par wahi se resume hota hai; answered questions safe rehte hain.

Q: Camera nahi hai to interview de sakte hain?
Haan. Camera off hone par bhi voice answers record hote hain — room me "Camera off — your voice answers still count" placeholder dikhta hai. Video answers ka fayda ye hai ki hiring team playback me aapko dekh sakta hai.

Q: ATS webhook fail ho jaye to?
Push attempt honestly log hota hai (✗ + message). Aap tab bhi "Copy JSON" ya "Download" se dossier manual import kar sakte hain, ya per-position CSV use kar sakte hain.

Q: Client decision galat ho gaya, change kaise karein?
Decision locked hai. SeeWe recruiter se contact karein — wo platform team ke through revisit kar sakta hai.

Q: Email digest real me jaata hai?
Demo me digest preview simulated hai — "Send digest" par toast aata hai lekin real email nahi jata. Real email delivery documented next-step hai.

Q: Non-IT jobs ke liye bhi AI interview theek questions puchhega?
Haan — question engine 13 domains detect karta hai (Sales, Finance, HR, Operations, Healthcare, Legal, Hospitality aadi). Non-technical domains me coding questions explicitly blocked hain, aur AI fail hone par domain-neutral fallback questions chalte hain.

Q: Recordings kitne din rehti hain?
Default 45 days. Recruiter apne Clients tab me per-client 7–365 days tak retention set kar sakta hai. Candidate recordings sirf hiring surfaces par play/download hoti hain.

> **Demo limitations (honest list):** passwordless auth (production me real auth chahiye), digest email simulated hai, offline sandbox me external ATS webhook push FAILED log hota hai (manual JSON hamesha kaam karta hai), aur ek client org ke sab users same contact email share karte hain. Ye documented next-round items hain, bugs nahi.

7.4 Five-minute demo script — poora flow apne aankhon se dekhein

Neeche ka script follow karke aap teeno roles ka poora lifecycle 5 minute me experience kar sakte hain. Har step ke baad Sign out karke agle role me login karein (demo chips se ek click me ho jata hai).

1. **Recruiter ban jaiye — ananya@technova.com**
   Hiring Hub me Applicants tab kholein, kisi job ka chip lagayein aur ek application par nazar daalein — match %, timeline chips, private notes. Phir **Interview Hub** tab me kisi completed candidate par **"Open →"** dabayein: 360° detail me question plan, transcripts, recordings, scores aur report sab ek jagah milega.

2. **Candidate ban jaiye — arjun.mehta@gmail.com**
   My Journey me kisi application par **"▶️ Resume AI Interview"** dabayein. Camera allow karein, ek-do sawal bolkar answer karein (Take A/B bhi try karein), phir Exit. Notice kijiye — na typing hai, na koi score dikhta hai; sirf "Answer received" confirmations aate hain.

3. **Report share kijiye**
   Recruiter me wapas jaakar Applicants tab me kisi INTERVIEWED candidate par **"Share Report →"** dabayein aur Flipkart chunein. Client ke portal users ko notification chala jayega.

4. **Client ban jaiye — partnerships@flipkart-demo.com**
   Client Portal me shared report par **"View report"** kholein — score donut, dimension bars, transcript aur ek recording play karein. Phir **"Judge candidate"** → 👍 Approve + chhota note → **"Submit verdict"**.

5. **Decision ka asar dekhiye**
   Recruiter me notification dekhein ("✅ Flipkart · {candidate} · {job}") aur Applicants timeline me "👍 **Client approved ✓**" chip. Analytics strip ke "Client decisions" chart me bhi ye call plot ho gayi hogi.

6. **ATS handoff — last mile**
   Interview Hub me usi candidate ka detail kholein → **Send to ATS** panel → integration register karein (koi bhi https endpoint) → **"Copy JSON"** se poora dossier clipboard le lein ya **"Download"** se JSON file save karein. Bas — candidate ka next process ready hai.

Hire with evidence. Get hired with confidence.

SeeWe AI interviews every shortlisted candidate on video — voice-first, structured, and transparent to the hiring team. Recruiters see the full dossier, clients make the final call, and candidates always know exactly where they stand.

Job Seeker | Recruiter | Client Partner
